

Big Five Personality Traits

*The Big Five personality traits, also known as Five Factor Model is a a set of five broad traits or domains, used to explain human personality in these five areas. The five factors may be easily remembered using the acronym **OCEAN**.*

These five categories are usually described as follows:

#1. OPENNESS

Openness to experience reflect individuals who are **willing to try new things**. They are perceived to be **intellectually curious, open to emotion** and **sensitive to beauty**. People with higher levels of openness are **open to unconventional ideas and beliefs**, and are willing to challenge their existing notions.

People with low levels of openness are perceived as **closed-minded, pragmatic** and **wary of uncertainty**. They prefer familiar environments and like to **stick to well-known traditions and routines**. They are more suspicious of beliefs and ideas which challenge their status quo.

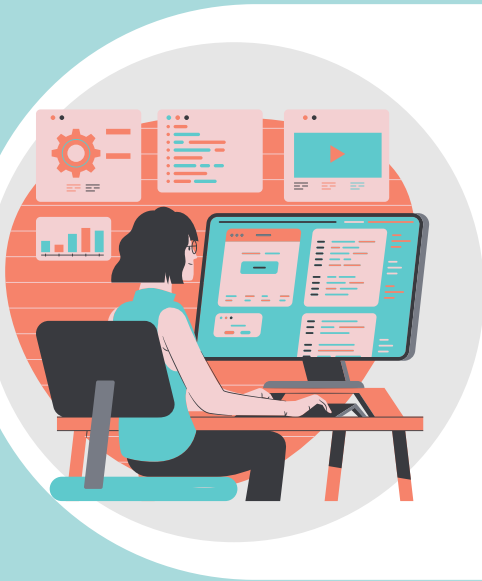

#2. CONSCIENTIOUSNESS

Conscientiousness reflect individuals who are **self-disciplined, well-organized, goal-oriented** and **act dutifully**.

High conscientiousness is perceived as being **stubborn, punctual** and **show preference for planned behavior and tidy environment**. They are ambitious and are motivated to succeed in every aspect of their lives.

Low conscientiousness is associated with **flexibility, spontaneity** and **impulsive behavior**. Low conscientiousness individuals are show less motivation and are **more relaxed** in setting life goals and often take action last minute.

#3. EXTRAVERSION

Extraversion reflect individuals who **seek external stimulation** through social engagement. They are perceived to be **outgoing, sociable** and **thrive in company of others**. They enjoy being the center of a group.

Introverts - people with low extraversion, are **quiet, reserved** and more independent of their social world than extraverts. They enjoy being in **smaller social groups**. They need less stimulation, and **more time alone** than extraverts.

This personality trait is measured on an introversion-extraversion continuum. Individuals who fit in the middle of the two traits are described as **ambiverts**.

#4. AGREEABLENESS

Agreeableness reflect individuals who are **friendly, co-operative, kind, helpful** and **trustworthy**. They have an **optimistic view of human nature** and are **more likeable** by their peers. They dislike getting involved in conflicts with others and **avoid confrontation**.

Disagreeable individuals are less concerned with pleasing other people and making friends. They are more **suspicious of other people's intentions** and are **less charitable**. They behave in their own **self-interest** and show less regard for the needs of others. As a result, they may be perceived as selfish.

#5. NEUROTICISM

Neuroticism is the tendency to experience negative emotions, such as **anger, anxiety, stress** and **depression**. These individuals are **emotionally reactive, over-think their problems, do not cope with stress effectively, dwell on its negative aspects** and can be flippant in the way they express emotions.

Individuals who score low in neuroticism tend to be **emotionally stable, free from persistent negative feelings** and **are less easily upset**. They are able to **stay calm** in response to stressful situations. They **worry less** about their problems and **deal well with stress**.

It is important to note that each of the five personality factors represents a range between two extremes. In the real world, most people lie somewhere in between the two polar ends of each dimension.

Ranks of Traits Under Openness to New Experiences

Based on the analysis of the responses, the 12 traits taken under **Openness to New Experiences** personality domain in the study were ranked for both male and female samples and following were the results.

Ranks of Traits for Males

- 1** Creativity
- 2** Curiosity
- 3** Vivid Imagination
- 4** Many Artistic Interests
- 5** Originality
- 6** Believe in the Value of Art
- 7** Innovative
- 8** Prefer a Range of Activities
- 9** Complex and Deep Thinking
- 10** Interests in meaning of things
- 11** Enjoy Intellectual Discussions
- 12** Hearing New Ideas

Ranks of Traits for Females

- 1** Many Artistic Interests
- 2** Vivid Imagination
- 3** Prefer a Range of Activities
- 4** Complex and Deep Thinking
- 5** Enjoy Intellectual Discussions
- 6** Creativity
- 7** Originality
- 8** Interests in Meaning of Things
- 9** Believe in the Value of Art
- 10** Innovative
- 11** Curiosity
- 12** Hearing New Ideas

Ranks of Traits Under Conscientiousness

Based on the analysis of the responses, the 12 traits taken under **Conscientiousness** personality domain in the study were ranked for both male and female samples and following were the results.

Ranks of Traits for Males

- 1** Immediately Starting a Task
- 2** Making good use of time
- 3** Systematic
- 4** Punctual
- 5** Attentive
- 6** Active
- 7** Sticking to Plans
- 8** Taking Responsibility
- 9** Organized
- 10** Persistent
- 11** Always Prepared
- 12** Getting Chores Done on Time

Ranks of Traits for Females

- 1** Making good use of time
- 2** Taking Responsibility
- 3** Punctual
- 4** Attentive
- 5** Organized
- 6** Immediately Starting a Task
- 7** Getting Chores Done on Time
- 8** Systematic
- 9** Sticking to Plans
- 10** Active
- 11** Always Prepared
- 12** Persistent

Ranks of Traits Under Extraversion

Based on the analysis of the responses, the 12 traits taken under **Extraversion** personality domain in the study were ranked for both male and female samples and following were the results.

Ranks of Traits for Males

- 1** Like Being the Centre of Attention
- 2** Dominance & Taking charge
- 3** Bold
- 4** Talkative
- 5** Outgoing & Sociable
- 6** Good at handling social settings
